

Aqib Ali

Experienced and motivated **SRE DevOps** specialist with a background in Linux System Administration and Engineering, spanning 6 years. Eager to embrace new challenges and constantly learn about the latest technologies. Highly organized with a proactive problem-solving approach and excellent communication skills. Thrives both in collaborative team environments and when working independently. Seeking opportunities to contribute expertise and drive innovation in the world of Site Reliability Engineering.

PROFESSIONAL SUMMARY

- Over 9+ years of experience in IT industry within **Configuration Management, Change/Release/Build Management, System Administration**, Support/Maintenance environments like **Red Hat Enterprise Linux, CentOS** and expertise in automating builds and deployment process using **Python** and **Shellscripts** with focus on **DevOps** tools and **GCP** and **Azure Cloud Architecture**.
- Highly accomplished **GCP** Engineer and Senior DevOps/SRE Specialist with experience supporting enterprise-scale environments through ticket-based **ServiceNow** operations, cloud IAM, and DevOps automation.
- Strong experience on **DevOps** essential tools like **Chef, Puppet, Ansible, Docker, Kubernetes, Subversion (SVN), GIT**, Hudson, **Jenkins**, Ant, Maven and migrated **VMWARE VMs** to AWS and Managed Services like EC2, S3, Route53, ELB, EBS.
- Experienced principles and best practices of **Software Configuration Management (SCM)** in **Agile, scrum**, and **Waterfall** methodologies.
- Strong experience in AWS, creating, importing and launching volumes, EC2, RDS, Lambda, security groups, auto-scaling, load balancers (**ELBs**), **NACL** in the defined VPC to design cost effective, fault tolerant and highly available systems.
- Experience in developing **Splunk** queries and dashboards targeted at understanding application performance and capacity analysis.
- Experienced in administration/maintenance of source control management (**SCM**) systems, such as sub version (**SVN**), **GIT** and knowledge of **Perforce** and **ClearCase**.
- I have experienced maintaining CI environment with build automation tools like **Jenkins, Bamboo** and **TFS** and extensively used Jenkins to streamline **CI/CD** process, automated Master-Slave configurations using temporary slaves.
- Created infrastructure in a coded manner (**infrastructure as code**) using **Puppet, Chef** and **Ansible** for configuration management of virtual environments, and **Vagrant** for virtual machine and resource control.
- Proven track record in **Google Workspace administration, GCP IAM roles, BigQuery dataset access, and storage bucket permissions**. Skilled in scripting with **PowerShell, Bash, and JAMF** to automate user provisioning and access management, with **Terraform** expertise for Infrastructure as Code.
- Recognized for blending **technical depth with excellent communication and soft skills**, enabling high-quality service delivery in high-pressure environments.
- Experienced in deploying and configuring **Chef Server** including bootstrapping of **Chef Client** nodes for provisioning. Created roles, recipes, cookbooks and databags for server configuration.

- Expertise in designing and managing scalable **microservices** architectures and cloud-native applications.
- Strong background in **security** best practices, ensuring secure infrastructure and application deployments.
- Extensive experience in **log aggregation**, monitoring, and alerting using tools like ELK stack and Prometheus.
- Successfully reduced deployment times and increased reliability through **Blue-Green and Canary** Deployment strategies.

TECHNICAL SKILLS

Skill Category	Description
Cloud Services	AWS (EC2, S3, RDS, MSK, Route53), GCP (IAM, BigQuery, Buckets), Azure
Containerization	Docker, OpenShift , PodMan
Databases	Postgres, MongoDB, Oracle, SQL Server, DB2
System Updates	OS maintenance , AIX & Linux System Administratio
Virtualization	VMware, vCAC, vCenter
Scripting	Terraform, Bash, Python, PowerShell, JAMF scripting
Data Migration Tools	AWS DMS, ETL Pipelines, Snapshot/Restore, Schema Validation, Data Replication
Identity & Access	GCP IAM (Groups, Roles, Permissions, BigQuery access), Terraform (policy automation), PowerShell scripting
Hardware	HP ProLiant, Dell Power Edge
Automation	Terraform, Ansible, Puppet, Chef, CloudFormation
Devops Tools	Azure DevOps (Boards, Repos, Pipelines), Jenkins, Jira
Clusters	VCS, Redhat Cluster, HA
Incident Management Tools	Jira, ServiceNow, RT
Performance Management	Performance tools, Dynatrace, Splunk, AppDynamics
Monitoring and Analysis Tools	CloudWatch, Nagios, Hobbit
Configuration Management Tools	Ansible, Chef, Puppet, ANT, Maven, Make
Programming Languages	C, Java/J2EE, .NET, Xml, Korn Shell, Perl, Ruby, Python, Groovy, PowerShell, SQL, Boto, Fabric, JavaScript, HTML
Operating Systems	UNIX (Solaris 8,9,10), Linux 5/6, Ubuntu, AIX, Windows 2008,2012
SCM/Version Control Tools	TFVC, Git, GitHub, Git LFS, git-tfs, TFS4JIRA
Web Service Tools	JBoss, Apache Tomcat 5.x, IntelliJ IDEA, Oracle WebLogic 10.x/11.x, IBM WebSphere 5.x,6.x,7.0, IIS Server, JBoss
CI Tools	Jenkins/Hudson, Bamboo, U Deploy, X Deploy, Anthill Pro
SDLC	Agile, Waterfall Methodologies
Database Systems	SQL Server 2008/2012, Oracle 9i/10g, PL/SQL, MS Access, DB2, Postgres, Sybase.
Ticketing/Bug Tracking	Jira, Remedy, ServiceNow, Junit, PMD, Red Mine, and Bugzilla.

EXPERIENCE

REDFORT TECH (PNC Bank) RESTON, VA

APR 2021 – Present

DESIGNATION: Infra Configuration Engineer

RESPONSIBILITIES:

- Designed and executed data migration strategies for Postgres, MongoDB, Elasticsearch, and S3, ensuring zero data loss, validated schema consistency, and performance optimization.
- Built migration automation tooling with Python and Terraform, integrating verification steps for data completeness, throughput monitoring, and rollback safety.
- Established Kafka (MSK) clusters and data pipelines supporting real-time streaming and replication workloads.
- Automated configuration and deployment workflows through Terraform, Ansible, and Jenkins, increasing reliability and reproducibility of migration and provisioning tasks.
- Designed and maintained multi-AZ AWS infrastructure, including EC2, EKS, ECS, and MSK, ensuring HA and disaster recovery compliance.
- Implemented configuration and development tasks following established coding, testing, and debugging standards.
- Supported the migration of TFS and Azure DevOps environments to Jira and Git, ensuring smooth conversion and repository integrity.
- Utilized git-tfs and TFS4JIRA tools for mapping TFVC branches, preserving history, and maintaining work item traceability.
- Conducted post-migration validation and testing, verifying successful issue and commit synchronization.
- Managed Azure DevOps Boards including Work Items, Backlogs, and Queries for ongoing project tracking.
- Coordinated with multiple development teams to ensure repository consistency and issue resolution.
- Provided regular progress and completion reports to project leads.
- Configured and maintained GCP IAM roles and permissions, managing user groups, BigQuery access control, and bucket policies.
- Designed, deployed, and managed scalable cloud infrastructures using Google Cloud Platform (GCP) services including Compute Engine, Kubernetes Engine (GKE), Cloud Storage, and BigQuery.
- Automated infrastructure provisioning and configuration through Terraform, Helm Charts, and Python/Bash scripting, improving deployment efficiency and reducing manual errors.
- Implemented monitoring, logging, and alerting systems using GCP Monitoring and Cloud Logging, ensuring high availability and rapid incident response.
- Developed and maintained CI/CD pipelines leveraging Jenkins, GitHub, Airflow, and Docker, supporting seamless build and deployment workflows.
- Configured networking components such as VPCs, firewalls, load balancers, and VPNs, ensuring secure and optimized connectivity.
- Managed database services including Cloud SQL and BigQuery, optimizing query performance and data reliability.
- Collaborate with DevOps and security teams to enforce best practices for cloud governance, IAM policies, and cost optimization.
- Supported cloud migration projects, application modernization, and scalability initiatives across multi-environment setups (dev, staging, prod).
- Performed log management and system monitoring via Splunk and AppDynamics dashboards.
- Supported patching, kernel upgrades, and migration validation during enterprise platform refreshes.

RESPONSIBILITIES:

- Built and optimized CI/CD pipelines for cloud-hosted applications using Jenkins, GitHub Actions, and Terraform.
- Designed data migration and backup pipelines between hybrid cloud platforms (AWS, GCP, and VMware).
- Managed large-scale Kafka (MSK) and Elasticsearch clusters, focusing on high availability and replication reliability.
- Created repeatable IaC templates to migrate compute and storage workloads to AWS, using Terraform and Ansible.
- Led development of automation tooling that reduced manual intervention in environment provisioning by 60%.
- Performed schema validation and integrity testing for database migrations and ETL workloads.
- Configured GCP services including Compute Engine, Cloud SQL, and Load Balancing for production-grade workloads.
- Supported container orchestration using GKE, Kubernetes, and Helm, building self-service deployment patterns.
- Integrated CyberArk PAM with AD and Kubernetes clusters for privileged access management.
- Conducted regression testing and post-migration performance benchmarking, reducing latency by 22%.
- Designed monitoring dashboards in Splunk and Grafana for data synchronization and cluster health.
- Collaborated with developers to enhance CI/CD pipelines and promote automation-driven deployment practices.
- Built infrastructure automation pipelines using Ansible, Terraform, and GitHub Actions to enable Infrastructure-as-Code (IaC) and repeatable deployments.
- Led Active Directory management — domain controller upgrades, OU design, Group Policy optimization, and RBAC alignment.
- Designed and implemented observability stack — Splunk, Azure Monitor, Grafana — enabling proactive monitoring of Kubernetes and legacy platforms.
- Collaborated with DevOps and Security teams to ensure HIPAA and PCI compliance across the hybrid infrastructure footprint.
- Participated in 24/7 on-call rotations — resolved critical incidents and improved platform reliability through root cause analysis and corrective actions.
- Provided expert-level Linux (RHEL / centos) support and managed Domain Servers like Exchange, SMS, Active Directory, VMware, and printer servers.
- Resolved login, performance, virus removal, domain addition, permissions, and group policy issues on Windows servers.
- Architected and deployed secure, scalable AWS environments utilizing VPC, EC2, S3, RDS, DynamoDB, IAM, EBS, Route 53, SNS, SQS, CloudWatch, CloudTrail, Security Groups, Autoscaling, and RDS via CloudFormation templates.
- Supported enterprise middleware modernization across OpenStack and Linux environments hosting Java/J2EE workloads.
- Developed and executed scripts to migrate application configurations, environment variables, and services between AIX and Linux-based nodes.
- Managed JBoss clusters and implemented load balancing, session persistence, and

- connection pool tuning for optimal performance.
- Built and deployed CI/CD pipelines using Jenkins and GitHub Actions for automated package delivery and validation.
- Conducted regression testing and post-migration performance benchmarking, reducing latency by 22%.

REDFORT TECH (IBM) NEW YORK, NY

MAY2015-APR 2016

DESIGNATION: LINUX ADMINISTRATOR

RESPONSIBILITIES:

- Played key role in upgrading Oracle 11g to 12c database and provided direct support to Directors, DB Administrators, and Developers.
- Wrote scripts to automate tasks, managed Symantec VCS Cluster and Storage Foundation, and supported soft applications with participation in DR recovery drills.
- Installed, patched, and maintained all Oracle software, implemented Oracle RMAN backup and recovery system, and data guard failover recovery.
- Performed Oracle database performance tuning and managed users and security through Oracle Enterprise Manager (OEM).
- Implemented Smart I/O to boost oracle database performance and monitored performance for fast responses to front-end users.
- Participated in infrastructure planning and growth on AWS, managing full application stacks on Amazon cloud-based computing environment.
- Acted as main point of contact for CA Workload Automation, installing, configuring, and maintaining the automation tool, scheduling various automated jobs.
- Managed an Active-Passive VCS Cluster with periodic failovers, upgraded the cluster with minimal downtime, and responded quickly to cluster and system alerts.
- Responsible for backups and restores using NetBackup 7.7, managing tape rotations, and upgrading NetBackup from 7.1 to 7.7.
- Supported and automated database migrations from Oracle 11g to 12c, implementing RMAN and Data Guard replication.
- Developed Ansible and Bash scripts for automated deployments, upgrades, and environment setup.
- Conducted schema analysis, dependency mapping, and data validation pre- and post-migration.
- Employed containerization (Docker) for environment isolation and repeatable migration testing.
- Monitored and tuned Oracle performance, optimizing queries and I/O configurations post-upgrade.
- Participated in cloud migration planning on AWS, managing full application stacks for Linux-based workloads.
- Managed VCS Clusters, automating failover scenarios with minimal downtime.
- Configured automated job scheduling and system patching via Ansible and CA Workload Automation.
- Implemented robust backup and restore strategies using NetBackup and AWS S3 snapshots.

EDUCATION & TRAINING

Bachelor of Science
Information Technology, New York City College of Technology
